## PROFESSIONAL SUMMARY

Backend Software Engineer (SDE-2) with 4+ years designing scalable, high-availability distributed systems and microservices in Java and Spring Boot. Expertise in event-driven architecture (Apache Kafka), cloud-native deployments (Docker, Kubernetes, Amazon Web Services), RESTful API design, and relational/NoSQL databases — serving 50,000+ daily transactions at 99.95%+ uptime. Proven record of leading Scrum teams, driving 45–80% performance gains, and maintaining 85%+ code coverage via Test Driven Development (TDD) with strong foundation in System Design (HLD/LLD) and SOLID principles.

## TECHNICAL SKILLS

|                        |                                                                                                                                                                                                                             |
